**Subject:** Final Comments on NCUA ANPR on Corporate Credit Union System Strategy

From: Teresa Freeborn  
Credit Union: Xceed Financial FCU  
Message:

April 6, 2009

Ms. Mary Rupp  
Secretary of the Board  
National Credit Union Administration  
1775 Duke Street  
Alexandria, VA 22314-3428

**RE: Comments on the Corporate Credit Union System Strategy**

Dear Ms. Rupp:

On behalf of Xceed Financial Federal Credit Union, I appreciate the opportunity to comment on the NCUA Board's recent actions designed to stabilize the corporate credit union system. The program, as initially outlined in NCUA Letter to Credit Unions No. 09-CU-02, and as further reflected in NCUA Letter to Credit Unions No. 09-CU-06, included three primary objectives regarding the corporate system: 1) maintaining liquidity; 2) strengthening capital; and 3) evaluating the existing structure of the corporate system via an Advanced Notice of Proposed Rulemaking (ANPR). Our comments will address the actions the Board has taken towards accomplishing these objectives.

**Maintaining Liquidity and Strengthening Capital**

We have significant concerns that the Board's strategy, as crafted and implemented to date, does not fully take into account the serious repercussions to the natural person credit union system and, as a result, to consumers and credit union members. This concern has been further sharpened by NCUA's unexpected actions on March 20, 2009, involving U.S. Central FCU and Western Corporate FCU (WesCorp), which will have an especially pronounced effect on credit unions in the Western states. Our fear is that unless alternative methods and tools are used to soften the staggering financial blow of NCUA's actions, some credit unions may never fully recover from its impact. As a result, we believe there is a real risk that public confidence in credit unions and in the NCUSIF will be negatively affected. However, we are encouraged and cautiously optimistic that the Board's action on March 26, 2009, to ask Congress to form a Corporate Credit Union Stabilization Fund takes an important step towards addressing this concern. By spreading the cost of the stabilization action over as much as seven years, federally-insured credit unions are given the breathing room and flexibility they desperately need.

**Impact on Credit Unions**

As a result of the 69 percent NCUSIF write off, the accompanying premium assessment to return the NCUSIF capitalization ratio to 1.30 percent, and the write-off of PIC and MCA shares at WesCorp, many federally insured credit unions will experience negative ROA for 2009. Further, a number of credit unions will fall under Prompt Correction Action (PCA) requirements.

While most credit unions will be able to absorb such losses and eventually recover, such an unexpected jolt could have a debilitating, long-lasting, and systemic effect on many credit unions, as well as the communities they serve. Ultimately, this will cause many credit unions to pull back from providing loans and other financial products and services to working families just when the national and states' economies need them the most. This has already started happening in some areas and, as credit unions assess the impact the Agency's actions will have on their operations, will surely accelerate.

In addition, we are greatly concerned that the reduction in capital levels that credit unions will experience as a result of NCUA's actions will lead to a marked contraction in their lending activity. As Executive Director Marquis stated in NCUA's webinar on March 23, 2009, there is a correlation of 10:1 between capital dollars and lending dollars (i.e., a one dollar reduction in credit union's capital will lead to a \$10 reduction in loan dollars available to members).

Finally, we fear that—in spite of credit unions' healthy net worth levels—the combined effect of 1) a significantly reduced credit union presence in the consumer financial services market, and 2) previously unheard-of levels of credit union negative earnings could have a potentially damaging effect on the well-earned confidence that members and the public have in the safety and soundness of credit unions. Such an undermining of confidence in the credit union system is unwelcome at any time, but it could be particularly detrimental during such turbulent economic times, and could eventually lead to an increased risk to the NCUSIF.

#### Tools Available to NCUA

We support CUNA, NAFCU, and our state leagues in continuing to work with Congress to obtain the following tools to help NCUA address current liquidity and capital issues:

- TARP or other government funds as a backstop to NCUSIF - Credit unions have been working with members of Congress to urge the Treasury to set aside at least \$20 billion of TARP funds to be accessed should corporate or natural person credit union losses covered by the NCUSIF exceed \$500 million. By allowing NCUA to reduce the current cost to credit unions of the corporate stabilization plan, this action would greatly mitigate the negative impact on credit unions' ROA and net worth and would bolster both credit union system confidence and public confidence.
- Corporate access to the Central Liquidity Facility (CLF) - As recommended in the January 2009 report from PricewaterhouseCoopers LLC to the NCUA Board, the CLF should be used to infuse liquidity and capital into the corporates. A change to the Federal Credit Union Act would expand authority of the CLF beyond its current authority to make liquidity loans only to natural person credit unions to permit direct investment in corporates.
- Replenishment of the NCUSIF over multiple years - FDIC is currently permitted five years to replenish their insurance fund. Section 2 of H.R. 786 (which makes permanent the \$250,000 deposit insurance coverage for federally-insured financial institutions) would extend this period of time to eight years. In the interest of greater regulatory coordination within the financial services sector, we believe the replenishment period for credit unions should mirror that of banks, and are supporting an amendment to this legislation to provide a similar restoration period for the NCUSIF.
- Risk-based net worth standards - Efforts to modernize the PCA system may also include urging Congress to consider the removal of all of the PCA stipulations from the statute and leave it to regulatory determination, similar to the system under which the banking industry operates. This would provide for greater flexibility and responsiveness, especially during times of crisis. Credit unions, which have proven to be less risky financial intermediaries

than banks and thrifts, should be subject to a PCA framework that provides, at minimum, as much flexibility as the FDIC, the OTS, and the OCC utilize for bank PCA standards.

o We also encourage the NCUA Board to support changes to the definition of net worth that would allow government assistance in the form of loans to credit unions to be included in a credit unions net worth ratio. Such loans, in the form of "Section 208" assistance, were used effectively in the 1980's to help a number of credit unions through a severe economic crisis. These credit unions are now healthy, and are providing valuable services to hundreds of thousands of members. The loans that were used to help these credit unions were repaid, with interest.

- Credit union access to alternative capital - In order to effectively compete, to have a sufficient financial base to effectively serve their members, and to adjust to fluctuating economic conditions, credit unions must have the ability to build additional capital. Structured properly, giving credit unions this ability will provide an additional buffer to the NCUSIF, and make the fund stronger. We support working with Congress as needed towards this end.

We urge the Board to actively support the ongoing efforts to secure these tools for NCUA, and further recommend that the Agency assertively pursue the recently announced Treasury initiative designed to deal with troubled assets (i.e., the 'Public-Private Investment Program').

#### Other Possible NCUA Actions in View of Credit Union Ownership Interests

We would like to comment regarding NCUA's use of and reliance on Pacific Investment Management Company (PIMCO) and its analysis of the residential mortgage backed securities (RMBS) held by corporates. Before committing almost \$6 billion to replenish the share insurance fund, not to mention impairments of credit union capital deposits in corporate credit unions, credit union owners of WesCorp and US Central deserve very detailed information on the assumptions, methodology, and results of the PIMCO study in order to better understand the calculation of the cost estimates, and to determine whether the agency's cost estimates of the losses for the corporates are reasonable and justified. To date NCUA has provided credit unions little information about the PIMCO report, and absolutely no details from it. Further, we are gravely concerned about the apparent conflict of interest between PIMCO's role as analyst of corporates' portfolios and their publicly stated intention to purchase legacy/toxic assets under the Treasury's Public-Private Investment Program. If true, we believe that NCUA should lead the Agency to reevaluate PIMCO's current loss estimates for the corporates, as well as discontinue any further reliance on the company's analysis regarding this issue. At that point, the NCUA Board should work on devising a plan for credit unions to pay for the actual losses that may result from corporate investments as they occur, rather than requiring credit unions to pay up-front based on a theoretical estimate of the costs.

Finally, we propose that the Agency determine a regulatory or legislative solution to restore some or all of the member equity at WesCorp. Credit union members of the corporate deserve to have a degree of membership interest, and should be clear on the Agency's planned path to WesCorp's recovery and return to member ownership and control. AIG, BAC, Citigroup and others were technically insolvent and bailed out by the government, yet their shareholders were left with some, albeit significantly impaired, equity. We believe that a similar type of solution for credit unions should be explored. Such a move would go a long way towards restoring credit unions' sense of ownership, responsibility, and having a voice in WesCorp's future.

While we have strong disagreements with and concerns about much of the Agency's corporate stabilization actions to date, we support the new CEO of WesCorp, and will continue support the corporate with our deposits.

#### Evaluating the Structure of the Corporate Credit Union System

NCUA's ANPR seeks input from all stakeholders in the credit union industry regarding reforms to the regulatory and functional structure of the corporate system. It is a sweeping reconsideration of the current role corporate credit unions play in the credit union system, including their charters, powers, investment authority, capital requirements, fields of membership, risk management and governance. The ANPR takes an unnecessarily broad approach in that it assumes the current corporate system is flawed in virtually every respect, and therefore requires a complete retooling. While we fully acknowledge the serious stress that has been placed on the corporate system due to a variety of factors—some possibly foreseeable and preventable, some not—we do not agree that the current situation warrants what would amount to a wholesale remaking of corporates as they are known and used today. Therefore, rather than addressing the multitude of detailed questions in the ANPR, we would prefer to provide our views on the role of corporates in the credit union system, including our opinion of some of the key issues presented in the proposal.

### The Role of Corporates

We believe that corporates serve a vital role for credit unions. By serving as a central point for credit union investment and payment system services and aggregation, they provide many services that typically would be economically available only to the largest financial institutions (e.g., share draft processing, wire transfers, ACH services, cash orders, etc.). By managing liquidity within the credit union industry, corporates are able to effectively and efficiently move excess liquidity to the areas of greatest need. In addition, they provide the wherewithal to help credit unions manage risk, and are uniquely positioned to facilitate participation lending. Operational efficiencies and cost considerations prohibit many credit unions from obtaining these services directly from the Federal Reserve.

Without corporates, many credit unions would be largely dependent on more than one bank or bank-affiliated institution for these services, which would no doubt add significant additional costs and due diligence burdens to credit unions' operations, which would ultimately be passed on to members in the form of lower dividends or higher loan rates. We are reminded of the processing relationship (i.e., item processing, shared branching, and ATMs) that California credit unions had with Security Pacific Bank several years ago. When Security Pacific was merged with Bank of America, that relationship was severed by the bank over a six month period, which would have led to widespread dislocation and service collapse for California credit unions if WesCorp had not stepped in to pick up the item processing business and been instrumental in creating the business plan for Financial Service Centers Cooperatives (FSCC). Corporates have long maintained a necessary and trusted relationship with credit unions. Therefore, we strongly disagree with any action which would substantially alter the fundamental role and functions of the current corporate system.

### Key Areas of Disagreement

Our disagreement with the ANPR includes NCUA's contemplation to establish separate charters for payment system services and investments, as well as a return to defined fields of membership. We believe such a move would be anti-competitive and would hamstring the viability of the corporate system, likely leading to future problems requiring intervention by NCUA and/or natural person credit unions. Furthermore, not every corporate offers a full array of services (e.g., item-processing for imaged items). Restricting corporate usage to geographic fields of membership would unfairly and unsafely restrict credit unions from accessing critical corporate services. Along the same lines, we feel that a requirement that an "outside director" be from entirely outside the credit union industry would be potentially damaging, and could serve to weaken the unique nature and philosophy of credit unions (and, frankly, we believe that such a requirement would not have prevented current circumstances).

### Areas Where Improvements are Needed

While we staunchly support the continuation of the corporate system, we feel there is room for greater efficiencies, more effective risk management in the system, and governance enhancements.

**Greater Efficiencies.** We believe that corporate consolidation would be beneficial to the system, and that NCUA should be more open, responsive, and supportive of such consolidation by removing unreasonable impediments and/or resistance to corporate credit union mergers. We realize that each tier of the corporate network takes its own share of income, adds another layer of cost, each has its own capital requirements, all of which reduces efficiency and effectiveness.

**More Effective Risk Management.** Recent events indicate that corporates require a larger capital cushion, a greater diversification of investment to include more restrictions on concentration risk, and more—or at least better—risk management tools. In addition, to provide an even more robust “firewall” between corporate credit union risk and natural person credit union safety, NCUA might consider the creation of a separate insurance fund or separate insurance “system” for corporate credit unions in the future. As the Federal Reserve and Treasury contemplate measures for reducing systemic risk, it will be important to recognize the systemically important role the corporate system plays in the nation’s “financial plumbing.” Ultimately, 90 million credit union members rely on the corporate system to provide trading, payments, clearing, and settlement services for their local credit unions. NCUA’s aim should be to assure that the credit union system as a whole is better able to withstand future shocks.

**Enhanced Governance.** Finally, we believe that term limits for directors would be reasonable, as would minimum standards for experience, knowledge, and training.

To summarize: We believe that while the corporate system is in need of some key adjustments, it is not broken. External factors are what caused the current crisis, not the corporate system structure. Going forward, our credit unions would like to be reassured that NCUA will maintain an ongoing evaluation as to the possible need to continue the corporate deposit guarantee past 2010, and that the Agency is prepared to address the concurrent maturities of CU SIP investments.

In closing, we urge the Board to act to strike an effective and fair balance between the current needs of the corporate system and the very real, long-term, substantial needs of the entire credit union movement, and to strive for cooperation and transparency with credit unions in the process. We believe that to not do so will ultimately hurt public confidence in credit unions and the NCUA, and will be financially detrimental to American consumers.

Sincerely,

Teresa Freeborn  
President & Chief Executive  
Xceed Financial Federal Credit Union
